GALLIUM (Metal)

Ga; at. wt. 69.72; at no 31; valence 3; discovered by Boisbaudron in 1895. Gray brittle, hard, lustrous, tough, sl. malleable metal; greenish-blue reflection; silver-white when melted and remains liq. for weeks. Sp. gr. 5.9; M.P. 29.7°C. Boils above 1600°C; sol. in dil. HCl or in NaOH with evolution of hydrogen; slowly attacked by hot dil. nitric acid. It is used instead of mercury in thermometers.

GASOLINE ANTI-KNOCK COMPOUNDS

Products added to gasoline to correct the tendency of a fuel to "knock" or detonate. The phenomenon known as knock, or detonation, is caused by an abnormally rapid pressure rise or explosion within the engine cylinder. This violent combustion delivers a hammer-like blow to the piston head and combustion chamber walls. Aside from the disagreeable sound produced when a fuel is knocking, a serious loss in engine power results. The anti-knock characteristics of a fuel can be improved by either adding another fuel of higher quality (alcohol, toluol, benzol, etc.), or by the addition of a knock suppressor.

GELATIN

Edible gelatin in a purified protein obtained by hydrolysis from collagen-bearing tissue of food animals. Must comply with pure food laws of the U.S. and with laws established by certain of the states. Is a typical example of a reversible colloid of the emulsoid type. Chief characteristic is ability to form a jelly when dissolved in hot water and allowed to stand until cold. Has yellowish tint and is furnished in ground form, sheets or flakes. Is sol. in hot water; insol. in alcohol, chloroform. Uses—foods, confectionery, ice cream, jellied meats and pharmaceuticals (USP). Cont.—bbls. (300 lbs.). Tariff, edible gelatine valued at less than 40c, 12½% ad valorem plus 2½c specific; 40c or over, 20% ad valorem, 7c specific.

Technical Grade A protein produced from bones, white connective tissue and skin of animals. Chief characteristic, ability to form jelly when dissolved in hot water and allowed to stand until cool. Sol. in water; insol. alcohol, chloroform. Uses—photographic, lithographic, sizing, plastic compounds and textile and paper work.

GLYCOL DIACETATE

$C_6H_{10}O_4$. M.W. 146.14. Water-white liq. B.P. 186°C. Uses—solvent for cellulose esters and ethers, for printing inks and lacquers, and for resins; plasticizer; perfume fixative; prevents blushing in airplane dopes; imparts flexibility to cellulose ether films.

*Carbide & Carbon Chem Co, 30 E 42 St, N Y 17

GLYCOL DIFORMATE (Ethylene Glycol Diformate, Ethylene Formate)

$HCOOCH_2CH_2OOCH$. M.W. 118.09. As supplied commercially is a mild-odored, water-white liq. sol. in water, alcohol, and ether. This ester boils at 177°C. under 760 mm. pressure and has a specific gravity of 1.2240 at 20/20°C. Like glycol diacetate, it is solvent for cellulose acetate, nitrocellulose, and cellulose ethers. In the presence of water, glycol diformate will hydrolyze slowly with the liberation of formic acid. Hence, it can be employed in reactions where it is desired to develop a gradual source of this acid. It shows promise as an ingredient of embalming fluids.

GREASES, CABLE

Special greases, usually containing graphite as one of the constituents, used for the lubrication of wire ropes, chains, exposed gears, cranes, derricks, dredges, steam shovels, pile drivers, pump plungers, hoisting engines, quarry machinery, mining machinery, elevator plunges, elevator guides, fire hydrant valves, etc., where max. degree of protection against the action of water is equally important as the question of lubrication.

GREASES, CUP

Usually lime or soda soap greases, made in a wide range of consistency, according to the relative percentages of mineral oil and soap in them and the viscosity of the mineral oil employed. Should be free from fillers, but may contain graphite. Usually produced by mixing mineral oil with a calcium soap to give a desired "body" or "consistency." Most cup greases contain from 1 to 3% water.

*White & Bagley Co, P O Box 1171, Worcester, Mass

GREASES, TANNERS'

Materials compounded of rancid fish oil, resinous substances, lime and sulfate, and the residues of skins, membranes, and hair obtained from the chamoising process and used in finishing other skins.

E F Houghton & Co, 303 W Lehigh Ave, Phila 33, Pa

GREASES, TEXTILE

Special lubricating greases for textile machinery. Generally made from refined oils so as to be non-staining when unavoidably placed on fabrics.

*N Y & N J Lubricant Co, 292 Madison Ave, N Y 17

GREASES, WATERPROOFING

Heavy, plastic grease usually employed to seal and lubricate automobile waterpump bearings and packing glands. Also greases of various formulation, but usually of a calcium base with graphite incorporated or some modification that does not melt or dissolve in hot water. Soda base greases wet-out readily, but are very sol. and work into soapy emulsions when used in the presence of moisture.

hydroquinone TECQUINOL

• Tecquinol (Eastman technical hydroquinone) is an economical raw material for many organic syntheses. It reacts readily with amines to yield p-aminophenols and p-phenylendiamines of high quality. Condensation with phthalic and other anhydrides occurs readily. Because of its reduction potential, it is very useful as a polymerization inhibitor for many monomers. Likewise, it is one of the most satisfactory arresters for peroxide-catalyzed polymerizations. Available in fiber-drum lots.

INHIBITORS, CORROSION

Variety of products used principally in the art of pickling iron and steel in various forms; to remove scale. Addition agents in acid solutions to control or prevent solution of metals. Some advantages of use of inhibitors are:—economy of acid and steel; reduction in the embrittlement effects of diffused hydrogen in the steel itself; in certain cases a large reduction in the fume or spray from the pickling tanks; reduction in maintenance costs.

MONSANTO HIBITITE

High-powered pickling inhibitor

General Information: HIBITITE—Reddish-brown powder, soluble in both concentrated sulfuric and muriatic acids.

1. Protects the metal by causing the acid to work on the scale and not on the metal.
2. Saves acid by making the acid work on the scale only.
3. Saves metal by preventing the acid from attacking it.
4. Promotes the production of clean, bright, high-quality steel.
5. Reduces acid spray and the corrosion and dangers caused by acid spray.
6. Reduces the possibility of embrittlement caused by hydrogen penetration.

Hibitite: Reg. U. S. Pat. Off.

INKS, PRINTING AND LITHOGRAPHING

1. Newsprint inks which dry by absorption; 2. Book inks which dry by oxidation for use on sized papers; 3. Lithographic inks, which consist chiefly of bodied linseed oil and pigment or dye. Newsprint inks consist of rosin dissolved in mineral oil. Book inks usually contain rosin and other varnish gums, but very high grade inks of this type usually consist only of bodied linseed oil and special driers.

INSECTICIDE BASES

An insecticide is defined in the Insecticide Act of 1910 as "any substance or mixture of substances intended to be used for preventing, destroying, repelling or mitigating any insects which may infest vegetation, man or other animals or households or be present in any environment whatsoever." A few materials, such as sulfur dust, have both insecticidal and fungicidal value. Among the more common insecticides and fungicides are the arsenicals (Lead Arsenate, Calcium Arsenate, Paris Green, White Arsenic,

INSULATION MATERIALS

Four mineral products—asbestos, magnesium carbonate, diatomaceous earth and rock or mineral wool and also waste products of vegetable origin are among the principal raw materials out of which insulation materials are produced. Insulation is commonly supplied in the form of sectional pipe covering; insulating sheets, blocks, bricks, and blankets; insulating cements, fillers, and finishes; insulating papers and felts; as well as lightweight aggregate used with Portland cement for making insulating concrete. See also Fillers, Insulating.

G A & F® Carbonyl Iron Powders

Remarkably pure form of iron produced by heating liquid iron pentacarbonyl to temperature where it decomposes into iron in powdered form, liberating CO. Iron particles formed are all spheres, absolutely free of non-ferrous materials. Produced in various particle sizes at Grasselli, N. J., and Huntsville, Ala.

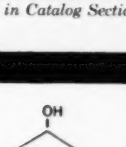
isopropyl acetate

• Eastman isopropyl acetate offers the lacquer formulator a low-cost solvent similar in properties to ethyl acetate. Because of its higher boiling range, it is slower to evaporate and, thus, is in demand for blush-resistant formulations.



The good solvent properties of isopropyl acetate indicate a wide utility for this material in the chemical process industries. Available in drums, compartmented and full tank cars.

ROWAG

AAA LANOLIN
Finest cosmetic quality available—triple refined vacuum deodorized, extremely light color and glossy texture—far superior to standard grades.

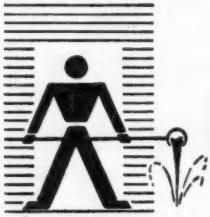
ALANOL*
A new fluid, oil-soluble fraction of lanolin, consisting principally of liquid lanolin alcohols—an effective emollient, softening agent, lubricant and conditioner—for liquid hair and skin preparations, lubricant additive, leather conditioning compounds.

ALCOLAN*
A self-emulsifying, lanolin fraction absorption base—forms lustrous w/o emulsions—for cosmetic, pharmaceutical use.

CERALAN*
A cholesterol-rich, alcohol lanolin fraction—an excellent emulsifier, emollient and stabilizer—for creams, lotions, lipsticks and ointments.

LANOCERIN*
A new ceraceous fraction of lanolin consisting of its solid alcohols and hard wax esters — for lipsticks, deodorant sticks, eyebrow pencils and wax compositions.

LANOCHOL*
A new wax fraction of lanolin, consisting mainly of its soft, wax alcohols combined with certain soft wax lanolin esters—an excellent emulsifier, emollient and superfatting agent — for cosmetic and pharmaceutical emulsions, toilet and shaving soaps, industrial hand cleaners, and wax compositions.



LANOGENE*
The fluid, oil-soluble ester fraction of lanolin — contains 16% cholesterol in liquid, oil-soluble form—an effective lubricant, emollient, solubilizer and penetrant—for toilet preparations, hair dressings, lipsticks and deodorant creams.

NEUTRAL WOOLGREASE
Refined to customers specifications—for rust preventives — lubricants — leather dressings, printing inks.

LIME ACETATE see Calcium Acetate

LIME (Hydrated) (Calcium Hydroxide, Calcium Hydrate, Slaked Lime)

A dry powder obtained by treating quicklime with water enough to satisfy its chemical affinity for water under the conditions of its hydration. It consists essentially of calcium hydroxide or a mixture of calcium hydroxide, magnesium oxide and magnesium hydroxide. Its principal chemical uses are in general the same as listed under lime (Quicklime). The A.S.T.M. specifications mentioned under quicklime also cover hydrated lime in most instances. Hydrated lime is shipped in numerous sizes of paper and cloth bags (50 pounds generally) and also in bulk to water treating plants and other users of large quantities. Regular and superfine terms are used to designate differences in the fineness or particle size of hydrated limes.

LIME NITRATE see Calcium Nitrate

LIME PYROLIGNITE see Calcium Acetate

LIME (Quicklime)

A calcined material, the major part of which is calcium oxide or calcium oxide in natural association with a lesser amount of magnesium oxide, capable of slacking with water. Contains also small quantities of silica, iron and aluminum oxides, and other impurities. Quicklime is produced by burning limestone or dolomite in shaft or rotary kilns. When exposed to the air for a considerable period of time, quicklime will absorb moisture and carbon dioxide. It first changes to calcium hydroxide, or hydrated lime, and later the exposed portion will unite with carbon dioxide from the air to form calcium carbonate, and thus the lime will lose some of its chemical activity for certain purposes. To prevent deterioration in storage quicklime is packed in steel drums or tight wooden barrels containing 180 or 280 lbs., and in waterproof multiwall paper bags or paper-lined burlap bags containing amounts of quicklime which vary among the different companies, usually about 80 lbs. Quicklime is shipped also in bulk. Its principal chemical uses include the following—as a fluxing agent, and for wire drawing, pickling, annealing, and pig casting in the iron and steel industry; for causticizing, and the manufacture of bleach, paper filler, by-products from waste liquor in the paper industry; as a softening agent, corrosion corrective, and for iron, color, and objectionable gas removal in water treatment; as an important ingredient in the maufacture of soda-lime glass; for dehairing hides in the leather industry; as a raw material in the manufacture of calcium carbide and calcium cyanamide; in the processing or manufacture of sand-lime brick; silica brick; sugar; insecticides, fungicides, and disinfectants; glue and gelatin; sodium bicarbonate and soda ash; paint pigments; varnish; lubricating greases; textiles; dyestuffs and intermediates; and for the treatment of sewage and trade wastes.

LIQUEFIED PETROLEUM GASES

Principal members of the group are: ethylene, propane, butane, isobutane, propylene, butylene. Butane is used for enriching water gas; as a base material for manufactured gas; in connection with butane-air distribution from central stations where manufactured or natural gas is not available. Propane is widely used for so-called "bottled service," for country residences, etc. Butane is used for commercial heating in plants. Ethane is sometimes used as a fuel. Ethylene is used for ripening fruit and as an anaesthetic. Propylene and butylene are used in organic synthesis.

LITHIUM CARBONATE

APPLICATION

Ceramics: Enamels, enamel colors, glass and glazes.

Chemical Manufacturing: In the manufacture of lithium salts, the base for manufacturing lithium acetate, bromide, chloride, citrate, phosphate, salicylate, etc. Also, a starting point for the manufacture of various other lithium salts used in the food and drug field.

PACKING Fiber drums—250, 100 and 25 lbs. net weight.

LITHIUM CHLORIDE

APPLICATION

Chemical Manufacturing: Starting material for production of lithium metal through electrolysis of the fused chloride.

Heat Treating: Used for both salt bath and atmospheric, for lowering eutectic temperature.

Welding: Used in the manufacture of welding fluxes for aluminum and magnesium. Has marked affinity for the oxides of Aluminum and Magnesium, as well as considerable fluxing power.

Air Conditioning:—Normally used as 40% brine for dehumidification, absorbing moisture from the air.

Dry Cell Batteries: For lowering operating temperatures.

PACKING Technical powder: fiber drums—350, 100 and 25 lbs. net weight. Brine: steel drums—550 lbs. net weight.

Write Dept. G for Data Sheets.

LITHIUM CORPORATION of America Inc — **METALLOY CORPORATION,** Division
RAND TOWER • MINNEAPOLIS 2, MINNESOTA

LITHIUM HYDROXIDE

APPLICATION

Pharmaceutical And Chemical Manufacturing: A strong base, similar to sodium and potassium hydroxide. Used in preparation of other lithium salts where use of carbonate is not feasible. Used in the preparation of lithium soaps, greases and waxes. Stearate, palmitate and oleate soaps are the three principals incorporated into these new and improved greases.

PACKING Steel drums—375, 100 and 25 lbs. net weight. No shipping regulations.

For NEOPRENE COMPOUNDING
MAGLITE-M*
(Magnesium Oxide)
- Better acid acceptance
- Better anti-scorch properties
- Better uncured stock life
- Safer tubing at higher die temperatures
- Faster tubing and wire covering
- Better molding characteristics
- Excellent curing aid

MAGLITE-D
All the advantages of MAGLITE-M with these added characteristics
- Greater bulking factor per cubic foot
- Higher magnesium oxide content
- Easier incorporation into neoprene
- Less dust

*Produced by Marine Magnesium Products Division of Merck & Co., Inc., from sea water by patented process.

METHYL CYCLOHEXANE

C_7H_{14}. M.W. 98.18. Water-white (less than 20 Hazen) liquid, 95% distilling within 2.0°C.; boiling range, 100.0-103.0°C. Leaves no residue on evaporation, and has no acidity. Water content less than 0.2%; Sp. gr. at 25/4°C., 0.763-0.766. Flash point, less than 10°F. Produced by hydrogenating toluol. Used as a solvent for many oils, fats, waxes and other materials, such as crude rubber, bitumen, and ethyl cellulose. May also be used as a degreasing solvent. Lbs. per gal., 6.4.

*Dow Chem Co, Midland, Mich
*Phillips Petroleum Co, Market Development Div, Bartlesville, Okla

METHYL CYCLOHEXANOL (Hexahydrocresol)

($C_6H_{10}CH_3OH$). M.W. 114.11. Colorless, non-explosive, slightly toxic liq. Pounds per gal. 7.75. Sp. gr. 0.930; refract. index 1.455-1.465. B.P. 170-190°C. Flash Point 68°C. Sol. in all organic solvents. Uses—as a plasticizer; solvent for paints, lacquers.

NITRILES FROM FATS

The ARNEELS are a series of 11 high molecular weight aliphatic nitriles having alkyl chain lengths of 8 to 18 carbon atoms.

The ARNEELS are available in commercial quantities for use in detergents, wetting agents, plasticizers for synthetic rubber and plastic products, rust preventatives, waterproofing compounds, chemical synthesis.

CREOSOTE OIL

The standard wood preservative. All specifications—any quantities. In drums and tank cars from all plants. Also in barges and tankers from Newark, Norfolk, Mobile and Seattle.

TRANSOTE—A highly refined, scientifically blended transparent wood preservative which provides a colorless treatment for the preservation of wood against decay and insect attack. TRANSOTE treated wood is dry—not oily—and after a short aeration period is practically odorless. It can be glued, painted, varnished or finished in any desired manner.

REILLY Wood Preservative Oil—A highly toxic, non-volatile, yet highly penetrating creosote oil for brush, spray, pressure or dip application.

OILS, COTTON-SPRAYING

Proprietary compounds applied to cotton to condition the fibres for the mfr. of yarn and finished cloth, and at the same time improve the working conditions in the mill. Should penetrate the fibres thoroughly and uniformly, should have no detrimental effect on later bleaching and dyeing operations. Should make the fibres more flexible and thus easier to draft; should reduce static; should reduce fly, dust and shedding; prevent breakage of long fibres; produce smoother yarns; in general restore the natural oils and moisture to cotton which has been stored for long periods.

Synthetic Drying and Styrenated Oils

ISOTYRE Styrenated Dehydrated Castor Oil practically devoid of free styrene, thus being practically odorless. Rapid drying into a hard film with good flexibility, excellent adhesion, waterproofness, alkali resistant, and no after tack. Its uses include: architectural white enamels, concrete paints, traffic paint, general purpose and toy enamels, floor sealers, shellac substitutes, clear varnishes and enamels of exceptional quality.

CONJULIN For formulas requiring oils that form quick drying, water resistant, tack free films. Used in place of Linseed Oil in Ester Gum and Bakelite 254 Resin Varnishes, drying time and water resistance are superior, approaching the corresponding wood oil varnishes. For: brake linings insulation varnishes, wrinkle finishes, air dried and baked coatings and general paint and varnish use.

ISOLINE Dehydrated Castor Oil. First developed commercially in this country by Woburn Chemical Corp. (N.J.). Drying oil of pleasing odor. The films are light in color and do not after yellow. Films are also flexible with good adhesion, long life and water resistance. For: Lithographic inks, linoleum, paint and varnish industry.

WOLIN OIL Developed to replace Chinawood Oil in the preparation of varnishes with resins such as Ester Gum. The resulting films dry quickly in the air to a tough, hard elastic film that has a high resistance to water and alkali. For: varnish films that quickly air-dry to a hard, elastic film.

OILS, FISH

Fish oils would include all oils expressed or extracted from various types of fish and would include cod, sperm, seal, and codliver oils, but in trade usage the term includes those oils which find special application in paint, linoleum, oil-cloth formulation, in thinning oils, soaps, etc., or combinations of fish oils used for these purposes. The most commonly used are menhaden, sardine, herring, salmon, whale, etc. See Oil, Menhaden; Oil, Sardine; Oil, Herring; Oil, Salmon; Oil, Whale.

OILS, FISH (Hydrogenated)

Various fish oils treated with hydrogen in presence of catalyst to produce a stearic acid substitute. White to grayish mixture of different fats. Grades—depends upon its titre and iodine number. Uses—cosmetics, mfr. high grade and metallic soaps (which are used in dusting powders), as stearic acid substitute for ex. in production of rubber tires.

OILS, FISH (Kettle Bodied)

Fish oils which have been heat-treated and bodied in kettle to increase the viscosity or body of the oils. This produces a better flow, brush-ability, higher gloss and low acid number. Amber color; fish odor has been oxidized and resultant odor is therefore lighter. Uses—printing ink, silk screen printing, paints, enamels, mill white, patent leather, linoleum, varnishes.

OILS, GRAPHITED

Lubricating oils which contain a relatively small percentage of graphite, usually in the colloidal form, which raises the critical temperature, thus permitting the use of smaller quantities of oil. This is desirable at high temp. where excess oil forms an excess of troublesome carbon. Less oil also entraps less dirt, reduces the fire-hazard.

OILS, HYDROGENATED

Prepared by adding additional hydrogen to oils whose molecules are unsaturated as regards hydrogen. This is done in the presence of finely divided nickel as a catalyst. The process is complex and there are many variations. Hydrogenation may be stopped at any stage, and very hard fats may be mixed with untreated oils so that any degree of hardness or softness is obtainable. The principal use for hardened oils is for cooking and in the mfr. of soap. Fish oils when hydrogenated lose most of their disagreeable odor and in this form can be used in soap kettles and also are used in paint formulation.

OILS, INK

Oils employed in ink making are classified as drying, semi-drying, and non-drying, the last being chiefly of petroleum origin. They are sometimes referred to as varnishes when in the finished state. Boiled oils dry much more rapidly than raw oils. Usually ink makers add a drier to the oil or mixture of oils.

OILS, SULFONATED

Sulfonated oils are products of the action of strong sulfuric acid on vegetable, animal, and mineral oils; also their fatty acids, and alcohols. They are available for use in a wide variety of processes in the textile, leather, metal and miscellaneous industries as follows: sulfonated castor oil, olive oil, neatsfoot oil, lard oil, rape oil, mustard seed oil, tea seed oil, sunflower oil, tallowmoleic acid (red oil), cod oil, herring oil, whale oil, sperm oil, coconut oil, palm kernel oil, palm oil, degras, fatty acids of the foregoing oils, fatty alcohols, and products from mineral oil refining. U.S. Bureau of Standards defines sulfonated oils; the term "sulfonated oil" shall designate the product of interaction between a saponifiable oil or fat or its fatty acids, or a mixture of saponifiable oils or fats or their fatty acids, and sulfuric acid or similar sulfonating agent, the reaction to take place under such conditions that some or all of the oil is converted into a sulfate. With the exception of water and alkali, it shall contain no other admixture. A sulfonated oil of any particular designation shall contain no other oil or fat, except the kind designated.

OILS, TANNING

Primary function of oils in tanning operations is the lubrication of the collagen bundles, which form the larger portion of the hide, so that they will not glue together resulting in a hard, brittle leather. Many oils and fats are used: tallow and oleo-stearine for stuffing harness, strap and belting leather; neutral oils such as cod, neatsfoot, castor, mineral, etc. See also Fat Liquors; Oils, Sulfonated; Tallow, Sulfonated.

PAINTS, BOILER

Paints for boiler fronts formulated with special oils and gums to obtain excellent elasticity and resistance to quick changes of temp. Should withstand temp. between 500 to 700°F. without losing life or lustre; should resist steam, smoke, fumes, gases, acids, and alkalies.

*Arco Co of Cal, 745 E 59 St, Los Angeles, Cal

PAINTS, CASEIN

Coatings in which casein replaces the linseed or other drying oils of ordinary paint. Casein provides the sizing property, whereas fillers supply the covering power. For indoor ornamental work, the usual fillers are lime-powdered chalk, or kaolin. For outside, lime or cement becomes the filler. The paint is prepared by mixing intimately correct proportions of casein, filler and pigment in a mill. The finishel powd. is mixed with water to correct consistency when used by the consumer. Casein paints provide pleasant effects, are very durable, and with special treatment are washable.

PECTIN

Complex vegetable carbohydrate found in fruit juices. Being natural material, it is not uniform in strength. A #100 pectin would jellify 100 lbs. of sugar combined with water or juices, so as to give 65% sugar content in finished product having pH of 3.00. Standardizing is accomplished by checking finished pectin and diluting with sufficient quantity anhydrous corn sugar to give strength of above standard. For export purposes, to reduce freight and space, a #160 grade is frequently sold. Newer developments of pectin are not entirely dependent on jellying strength; for this reason it

PERFUMES, SOAP, continued

in soap perfumes are: first, cost, and second, the evaporation of perfumes so that high boiling point essential oils or synthetic aromatics, especially in soaps where the perfume is added to the soap mass while it is still molten must be used. Where the perfume of essential oils would disappear on account of their low boiling point, the use of high boiling point synthetics retains the desired perfume odor. The perfumes must not discolor the soap.

PIGMENTS, BLACK CARBON

Included in this group are: the various grades of carbon black, thermatomic black, lamp black, bone black, also blacks which fall between the soft blacks and carbon blacks and which are produced by varying the method of mfr. of blacks from natural gas. Black pigments find wide application in rubber, inks, paints, lacquers, enamels, linoleum, paper, etc.

PIGMENTS, CHROMIUM

More common members of this group are: pure chrome green (a precipitated mixture of lead chromate and iron ferro and ferricyanide blue) reduced chrome green, also known as grinders' green (a mixture of lead chromate and iron ferro and ferricyanide blue precipitated on a base of barium sulfate or insol. siliceous material or any mixture thereof); chrome oxide green (a practically pure sesqui-oxide of chromium, Cr_2O_3); chrome yellow (usually mixtures of normal and basic lead chromates). Finished products are sold in the dry form or ground in oil, or in japan to form a paste. See A.S.T.M. Standard Specifications D212-27; D213-27; D263-28; D211-27. PIGMENTS, EXTENDER

Extender pigments having a wide range of chemical and physical properties are commercially available, such as the high- and low-oil-absorption precipitated calcium carbonates, diatomaceous earth, bleached silicas, and transparent water-ground mica. These, properly formulated in paints, varnishes, and lacquers produce special effects. Diatomaceous earth can be used to flat a paint or lacquer without excess pigmentation. Low-oil-absorption calcium carbonate is added to white enamels to reduce drag and improve leveling. High-oil-absorption precipitated calcium carbonates improve the dry hiding power of inside whites, and also aid in producing a dead flat effect. Transparent, white, water-ground mica, if added to a lacquer film, adds mechanical strength without affecting transparency. Mica can be used in small amounts to overcome checking and cracking of outside paints. Other extender pigments include talc, barytes, clay, slate, limestone, chalk, whiting, gypsum, Terra alba.

PIGMENTS, GREEN

Most commonly employed green pigments are: 1. Chrome Green, C.P., a combination of Prussian blue and chrome yellow, different proportions of which give a variety of tints; 2. Brunswick Green (often called Grinders), a reduced chrome green precipitated on barytes with less opacity and staining power, but greater brilliancy than chrome green, C.P.; 3. Chromium Oxide, a yellowish or sage green of good opacity, unaffected by light, heat, acids or alkalies, but somewhat dull in color; 4. Guignet's Green, permanent, stable and inert, very brilliant, but more expensive.

PIGMENTS, LUMINOUS

The principal substances that absorb rays of light and emit them in the dark are the sulfides of the alkaline earths and sulfides of zinc. The former react only feebly, zinc sulfide gives fairly intense illumination. Luminous pigments are used chiefly in the formulation of luminous paints, for stage purposes, in printing, etc.

PIGMENTS, MICA

In the paint pigment field wet-ground mica supplements as well as replaces asbestine or fibrous talc and is preferably used to the extent of 10% of the pigment.

PIGMENTS, LUMINOUS, continued

Specifications generally call for 90% ground through 325 mesh and smoothly rounded edges. If the edges are ragged, as are those of ordinary dry-ground mica, the particles will not lie on one another like fish scales or orient themselves in the plane parallel to the paint film surface. Bulky or granular particles likewise are not desired for the reason that equidimensional particles do not tend to force the paint film. Mica is claimed to be superior to fibrous materials, inasmuch as it not only tends to hold together the film as does the hair or fiber in plaster, but it also binds the film (due to the overlapping of plates like fish scales), increases its wearing qualities, and acts as a lubricant. High bulking quality (sp. gr. 3.35; wgt. per gal. 27.75; bulking, 0.0361 gal. per lb.).

PIGMENTS, PAPER

Used to improve the opacity, whiteness, and brightness of paper. Among the more common pigments employed are: titanium dioxide and composites of the dioxide with blanc fixe or calcium sulfate; the three main grades of zinc sulfate pigments, namely: 1. Commercial zinc sulfate; 2. Zinc sulfide pigment containing approximately 50% blanc fixe; 3. Zinc sulfide pigment containing approximately 70% blanc fixe. Paper pigments differ from paper fillers in that the latter usually have relatively large particle size, low whitening or opacifying power, and are retained by mechanical filtration rather than by adsorption. Many of the paper pigments are added in the beater stage, others like zinc oxide in the coating operation.

PIGMENTS, RED

Most commonly used red pigments are: 1. Red oxide, the shades vary from brown (Spanish) to deep red (Persian Gulf), more brilliant shades are produced chemically with a lighter ferric content; 2. Burnt ochre; 3. Burnt Sienna; 4. Red Lead (seldom used except as a priming coat); 5. Basic Lead Chromate; 6. Vermillion (the oldest of brilliant red pigments and prepared by subliming mercury and sulfur together); 7. Cadmium Red, a compound of cadmium, sulfur, and selenium, and largely used in artists' colors.

PIGMENTS, RUBBER

Used to impart colors to finished rubber articles and roughly classified as chemical or mineral pigments. Mineral pigments must withstand action of sulfur in the vulcanization operation, and usually iron oxides, zinc oxides, chromium oxides, complex sulfides of antimony, cadmium, mercury, and zinc, ultramarine blue and Prussian blues, Titanium oxides, carbon black, etc., are employed. Chemical pigments are in the form of lakes, toners, dyes, etc. Specially dispersed pigments and colors are required for latex.

PIGMENTS, TITANATED LITHOPONE

Titanated lithopones widely used to increase the opacity of either flats, enamels, or exterior paints; also as beater addition or for surface application in paper making. Their thin to medium consistency permits high pigmentation at low consistencies, or their high opacity may be used to produce high-hiding finishes at low-pigment concentration.

PIGMENTS, TITANIUM

Outstanding characteristics are great hiding power, chemical inertness, stability, ability to withstand extreme conditions of exposure without alteration or discoloration. Basic raw material is ilmenite and the principal titanium pigments are Titanium Barium Pigment, Titanium Calcium Pigment, Titanium Magnesium Pigment, and Titanium Dioxide. Titanium pigments are used in the mfr. of paint, paper, oil-cloth, linoleum, textiles, ink, rubber goods, and in many other industries where white pigments are required. See also: Titanium Dioxide.

PIGMENTS, WHITE

Materials which impart a white color to paints, lacquers, rubber, oil-cloth, linoleum, enamels, paper, textiles, cosmetics, leather, etc. Most common white pigments are lithopones, titanium oxides, extended titanium pigments, barytes, titanated lithopones, zinc sulfide, zinc oxides, etc.

PIGMENTS, YELLOW

Most commonly employed yellow pigments are: 1. Chrome Yellows, varying in color from pale yellow to dark orange. They are brilliant in tone and of considerable opacity and strength of color, and are reasonably permanent; 2. Barium Chromate, pale yellow in color, and unaffected by hydrogen sulfide; 3. Zinc Chrome, pale yellow in color, but completely decomposed by acids and alkalies, but resistant to heat; 4. Yellow Oxide, artificially prepared, stronger in color than ochre, inert, and resistant to heat; 5. Cadmium Yellow, which is a sulfide of cadmium, durable, and light-proof; 6. Yellow ochres; 7. Siennas.

PIGMENTS, ZINC

Principal members of this group are: 1. Zinc oxides, sometimes known as "Zinc White" and produced by the American process direct from the ore, or by the French process from spelter. Available in the dry form or ground in oil to form a paste; 2. The leaded zinc oxides; 3. Zinc Sulfide in either the dry pigment or ground in oil; 4. Litho-

WILLIAMS OFFERS YOU A CHOICE OF 142 SHADES AND TYPES OF PIGMENTS

From these you can quickly pick a pigment having the color, physical and chemical properties you require.

You can choose from 108 shades and types of synthetic and natural iron oxides; 64 Reds, 24 Browns, 18 Yellows, 2 Blacks. These include Metallic Browns, Venetian Reds, Ochres, Umbers, Siennas. We also offer Lampblack, Chromium and Cuprous Oxides plus a complete line of extender pigments.

PLASTICIZERS

FLEXOL plasticizers DOP, DHP, 3GH, 3GO, 4GO, TOF, 8N8, TWS, 8HP, B-400, and A-26 have been specifically developed for use with cellulose derivatives, vinyl resins, and synthetic rubbers. Each one meets the general requirements of compatibility, low volatility, and chemical stability. In addition, each FLEXOL plasticizer is outstanding in producing such properties as low temperature flexibility, processability, resilence, or high impact strength. There is a FLEXOL plasticizer for your needs.

PLASTICIZER SC

PLASTICIZER SC is a powerful plasticizer with excellent low temperature properties and low heat loss. It has exceptional stability and great resistance to oxidation and rancidity . . . is easily emulsified, and can be conveniently added to aqueous dispersions of synthetic resins and rubbers.

Added protection against fungi can be obtained in compositions containing PLASTICIZER SC by the use of compounds such as Copper 8Quinolinolate&others

KOPPERS
POLYSTYRENE

KOPPERS POLYSTYRENE 8X combines the excellent electrical and mechanical properties of regular polystyrene with increased heat distortion temperature (approx. 200°F.), greater tensile and flexural strength, fast, easy moldability.

KOPPERS POLYSTYRENE 7X has a minimum heat distortion temperature of 190°F. Its tensile and flexural strength are also higher than general purpose polystyrene.

KOPPERS POLYSTYRENE 3X offers you the low cost and fine molding qualities that make it desirable for mass production items.

KOPPERS POLYSTYRENES 81, 71 and 31 are the externally lubricated forms of the products listed above. Where mold release and ease of flow are of critical importance, these types are suggested.

ALL KOPPERS POLYSTYRENES are available in a wide variety of transparent, translucent and opaque colors.

POUR-POINT DEPRESSANTS

Preps. blended with lubricating oils which impart to the latter the ability to flow freely in winter and at low temperatures. It is claimed that the use of such products eliminates the necessity of dewaxing, permits the maintainance of a high viscosity index which in turn means lower consumption, easier starting, and less wear; also maintains high natural resistance to oxidation.

CHAPMAN™

Wood Preservatives
• • •
Agricultural Chemicals

A complete line of tested chemicals for all wood preserving problems • Sap Stain and Mold Control Chemicals • Weed Killers and Insecticides.

Pentachlorophenol

Crystals, for the preparation of wood preserving solutions. Efficient in protection of wood from decay and insect attack. Conform to specifications of U. S. Government and American Wood Preservers' Association.

Dowicide G

Sodium Pentachlorophenate; for protection against decay, mold and termite attack in fibreboard and insulating materials. Added to pulp during manufacture of the board.

Penta Preservative

For pressure and non-pressure treatment of lumber and wooden structures. A 5% pentachlorophenol solution in selected oil solvents. Controls decay; also termite and other insect attack.

Agricultural Chemicals

Insecticides for control of various insect pests which attack cotton, spring grains, legumes, tobacco and soybeans. New organic insecticides such as Benzene Hexachloride, DDT, Toxaphene, Chlordane, Aldrin and Dieldrin are used in these formulations.

Weed Killers

Weeds, grasses and brush can be inexpensively controlled by using Chapman Weed Killers. Each of the following has special characteristics: Sodium TCA 90%, Penta Weed Killer, Chapman Brush Killer, Borascu.

PRE-SPOTTERS (Dry-Cleaning)

Specialized soaps for removing stains which would be "set" by heat or not removed in the regular dry-cleaning operation. Stains most likely to become hard-set by heat may be grouped into three classifications: 1. Those which coagulate by heat, including many substances containing albumen such as blood, various foodstuffs, medicine, etc.; 2. Those which are oxidized by heat, including such substances as salad oil, cooking oil, and other unsaturated drying or semi-drying oils; 3. Those which become an integral part of the fibres when heated, including substances containing tannic acid, such as soft drinks, liquor, beer, some wines, fruit juices, grass and flower stains, tobacco, certain perfumes, coffee, tea, medicine, and photographic developing fluids.

PROTEINS, SOYA BEAN

Proteins derived from the Soya Bean are now available commercially in isolated and non-isolated form. These proteins resemble very closely the characteristics of animal proteins derived from milk and in addition possess many outstanding characteristics of their own. They are widely used in the mfr. of adhesives and are increasingly used for a variety of other applications such as the mfr. of paint, paper sizing and coatings as dispersing and deflocculating agents and as textile sizes.

REMOVERS, TEXTILE STAINS

Specially formulated compounds for the removal of stains in textile, leather, laundry, and dry-cleaning operations. Since stains are caused by many different products, stain removers must be selected for each particular problem encountered. See also Acid Hydrofluoric, Sodium Hydrosulfite, Hydrogen Peroxide. See also Bleaches, Laundry.

RESINS, ACRYLIC

Synthetic plastics produced from acrylic acid esters with outstanding characteristics of colorless transparency, excellent adhesion to most surfaces, chemical resistance, and great elasticity and in physical appearance range from soft, sticky semi-liquids to hard thermoplastic solids. Solutions of acrylic resins are used for coatings, adhesives, electrical insulation, impregnation, and for the mfr. of laminated glass.

RESINS, COAL-TAR

Synthetics produced usually from crude coal-tar naphthas in the approx. B.R. of 150-200°C. The paracoumarone-paraindene resins are thermoplastic, range from a very faint yellow to darker shades; sold in flakes, chips, or liq. form. Coal-tar resins possess good resistance to alkalies and acids; used as a binder in floor tile, in rubber compounding, in varnish formulation, in adhesives, rubber cements, mixed with other synth. resins for special purposes.

RESINS, VINYL

Thermoplastic resins made by the polymerization of vinyl acetate, vinyl chloride, and combinations of the two, possessing the characteristics of being tasteless, odorless, non-flammable, and with the exception of the polyvinyl acetate group not acted upon by acids, alkalies, alcohol, water, oil, greases, etc. Vinyl resins find wide application in lining metal containers, for caps, coating cements, coatings, molding phonograph records, dentures, impregnating fabrics, coating papers, and for molding miscellaneous items. Available in sheets, rods, tubes, and powder for molding.

Specifications: White crystalline powder; assay, 98.0% min.; solubility in water (1:5), complete, colorless; solubility in ethyl alcohol 95% (1:5), complete; conforms to N. F. test for heavy metals. No powder retained on 80-mesh screen.

Calcium Salicylate

Specifications: Fine white powder; solubility in water (1:50), complete, colorless.

Lithium Salicylate

Specifications: White or slightly grayish powder; assay 98.5% min.; solubility in water (1:20), complete, colorless.

Magnesium Salicylate

Specifications: Fine white powder; solubility in water (1:10), complete.

Methyl Salicylate, U.S.P.

Specifications: Clear, colorless liquid; assay 98.0% min.; solubility in 70% ethyl alcohol (1:7), complete; solubility in N KOH (1:10), complete; sp.g. 25°/25° C., 1.180-1.185; conforms to U.S.P. test for heavy metals.

Phenyl Salicylate, N. F. (Salol)

Specifications: White crystals; solubility in ethyl alcohol 95% (1:6), complete; m.p. 41.0° C. min.; conforms to N. F. tests for chloride, sulfate, free phenol, and free salicylic acid.

Potassium Salicylate

Specifications: White or very slightly pinkish powder, assay (dry basis), 99.0% min.; solubility in water (1:10), complete.

Sodium Salicylate, U.S.P.

Specifications: White powder or crystals; assay (as received) 99.5% min.; solubility in water (1:10), complete; solubility in ethyl alcohol 95% (1:10), complete; colorless or nearly colorless; conforms to U.S.P. tests for heavy metals and carbonizable impurities; trace max. powder retained on 60-mesh, 1.0% on 80-mesh, 2.0% on 100-mesh.

Strontium Salicylate, N. F.

Specifications: Fine white powder; assay (dry basis), 99.0% min.; solution in water (1:30), complete; conforms to N. F. test for heavy metals and barium.

Salicylic Acid (Ortho-Hydroxybenzoic Acid)

Specifications of U.S.P. Grade: White needles or powder, 100-mesh; assay 99.5% min.; m.p. 158.0° C. to 168.0° C.; conforms to U.S.P. test for carbonizable substances; ash 0.05% max.; powder 0.4% max. retained on 100-mesh.

Specifications of "B" Grade: White needles; assay 99.5% min.; m.p. 158.0° C. min.

DAVISON SILICA GEL

SILICA GEL

DESICCANT, CATALYST, CARRIER OF CATALYSTS

Hard, granular, clear, colorless colloidal material, capable of adsorbing large quantities of liquids or condensable gases; one cubic inch contains pores having a surface of about 50,000 sq. feet. Non-deliquescent. Will not cake nor powder. Can be reactivated at low temperature. Available in 3-mesh to minus 325 mesh.

Uses: Desiccant; as a catalyst and carrier of catalytic agents in many organic and inorganic processes; anticaking agent; drying of gases, liquids and solids; air conditioning; industrial applications such as drying telephone cable splices and drying refrigerants; process drying, etc.; for Dehydrated Packaging.

Moisture-Indicating Type (TEL-TALE* silica gel) changes color as saturation point is approached.

HYDROGEL—colloidal silica compound—chemically active with alkalies—which can be mulled.

PROTEK-SORB* silica gel—the protective adsorbent for dehydrated packaging.

Davison's is the original Silica Gel . . . developed to its present high-adsorbent qualities by Davison Research. Our chemical engineers can assist you to overcome your dehydrating and dehumidifying or catalyst problems. Informative literature is available.

WAX EMULSIONS AND EMULSIFIERS

Nopco 2252 — Ready-to-use, liquid paraffin wax size. Its fine particle size and remarkable alum sensitivity make it ideal for *internal sizing*.

Nopco 2252-A — A new acid stable wax size that cannot be precipitated by acids or alum. Has good stability to mechanical agitation. Recommended for *surface sizing*.

Nopco 2251-X — Anhydrous wax size containing perfect balance of wax and emulsifier. Stable, uniform sizes for paper and board may be produced spontaneously.

Nopco 2251
Nopco 2251-B — Anhydrous paraffin wax emulsifiers. Will carry maximum paraffin wax consistent with good emulsion stability. Excellent for paper stock and calender sizing.

SKIN PROTECTING COMPOUNDS

Compounds applied to the hands, and at times to the face and other exposed parts of the body, which serve as a protecting surface against the action of chemicals which burn the skin, or produce sores, eruptions, inflammation, etc. Many such products not only provide a protective layer but have neutralizing effects. Known also as dermatitis preventives.

SOAPS, DRAWING

Soaps for drawing vary in their chemical properties depending on the particular type of drawing they are intended for. Dry drawing of wire is usually done with high titre, so-called neutral tallow soaps. Wet drawing of copper wire is done with emulsions containing soap of low titre, usually made of olive or oleic acid. High titre tallow soaps, so-called neutral ones, are used as emulsifying and lubricating agents in the prep. of drawing compounds for sheet metal.

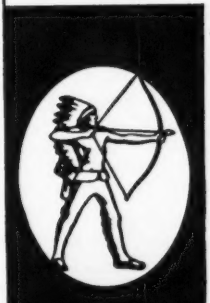
CARBOSE*



(Sodium Carboxymethylcellulose)

Wyandotte Carbose is designed specifically for detergent applications and a wide variety of other industrial uses requiring a low viscosity, rapidly soluble material.

In addition to its use in conjunction with soaps and synthetic detergents to effect a marked increase in carbon soil removal and whiteness retention on cottons, Carbose is extremely useful for improving the bursting strength of test liner as well as for giving various types of paper and paper board a superior finish which is resistant to penetration by inks and grease.

Carbose is of value as a warp size and finishing material in the textile industry.

Other applications include its use as a protective colloid, as an emulsifying agent and as an adhesive binder. *Reg. U. S. Pat. Off.

MONSANTO GLYCEROPHOSPHATES

Calcium Glycerophosphate, N. F.

Specifications: White powder; assay (dry basis), 98.0% min.; loss on drying, 12.0% max.; chlorides (as $CaCl_2$), 0.1% max.; sulfates (as $CaSO_4$), 0.68% max.; free phosphates (as P_2O_5), 0.02% max.; conforms to N. F. test for heavy metals.

Ferric Glycerophosphate, N. F.

Specifications: Buff or yellowish-green powder; assay (dry basis), 17.0% Fe min.; moisture, 11.0% max.; chlorides (as $FeCl_3$), 0.1% max.; sulfates (as $Fe_2(SO_4)_3$), 0.2% max.; free phosphates (as P_2O_5), 0.2% max.

Magnesium Glycerophosphate

Specifications: White powder; assay (dry basis), 97.0% min.; moisture, 12.5% max.; chlorides (as $MgCl_2$), 0.10% max.; sulfates (as $MgSO_4$), 0.10% max.; free phosphates (as P_2O_5), 0.2% max.

Manganese Glycerophosphate, N. F.

Specifications: Pinkish-white powder; assay (dry basis), 98.0% min.; moisture, 11.0% max.; chlorides (as $MnCl_2$), 0.15% max.; sulphates (as $MnSO_4$), 0.25% max.; free phosphates (as P_2O_5), 0.20% max.; conforms to N. F. test for heavy metals.

Potassium Glycerophosphate (75% Solution)

Specifications: Clear, colorless or slightly yellowish solution; assay, 61.6-63.2% anhydrous salt; carbonates (as K_2CO_3), 0.5% max.; chlorides (as KCl), 0.1% max.; sulfates (as K_2SO_4), 0.1% max.; free phosphates (as P_2O_5), 0.2% max.; heavy metals, 20 ppm max.

Sodium Glycerophosphate, N. F.

Specifications: White crystals or powder; assay, 68.0-72.0% anhydrous salt (equivalent to 96.4-104.9% hydrated salt); chlorides (as NaCl), 0.05% max.; free phosphates (as P_2O_5), 0.02% max.; conforms to N. F. test for heavy metals; sulfates (as Na_2SO_4), 0.1% max.

Specifications, 75% Solution: Clear, colorless or slightly yellow solution; assay, 50.0-52.0% anhydrous salt; carbonates (as Na_2CO_3), 0.5% max.; chlorides (as NaCl), 0.1% max.; sulfates (as Na_2SO_4), 0.2% max.; free phosphates (as P_2O_5), 0.15% max.; heavy metals, 20 ppm max.

Glycerophosphoric Acid (35% Solution)

Specifications: Clear, colorless liquid; assay, 35.0-36.0%; chlorides (as $CaCl_2$), 0.15% max.; sulfates (as $CaSO_4$), 0.30% max.; calcium (as CaO), 0.35% max.; free phosphates (as P_2O_5), 0.50% max.; heavy metals, 40 ppm max.

"VIRGINIA"
SODIUM HYDRO
DOES IT!

"Virginia" Sodium Hydrosulphite is used for vat color reduction, textile decolorizing and stripping, and in the bleaching of soaps, sugar, oils, and minerals, as well as straw and other fibres. It is a concentrated, free-flowing, uniformly crystalline white powder combining unusual product-stability with high reducing efficiency in solution. In 250-lb. single-trip steel drums.

MONSANTO
SANTOBRITE*

(Sodium Pentachlorophenate Technical)

Standard Forms: Powder; 1-oz. briquettes; pellets.

Characteristics: Light-tan color; nonvolatile; comparatively odorless; stable under ordinary atmospheric conditions when stored in a dry place. Soluble in various organic polar solvents. Stable, relatively unreactive; but partial conversion to insoluble pentachlorophenol occurs at pH's below 6.8, and insoluble salts are formed by reaction with ions of copper, lead, mercury, zinc, iron and calcium. Noncorrosive to metals. Available as substantially neutral material containing from 0.5 to 0.9% free alkali and as a more alkaline product containing 3-4% alkali.

General Information: A water-soluble industrial preservative, fungicide, algaecide, and herbicide. Used for manufacture of termite-resistant cellulose insulating board and for control of microbiological activity in paper, paperboard, leather, adhesives, latex and cold-water paints; for control of sap stain in green lumber; for control of slime and algae in water systems where the water is not used for drinking or bathing; and in the manufacture of herbicide formulations.

PENTA

(Santophen* 20, Monsanto's Pentachlorophenol Technical)

Characteristics: Dark-grayish flakes; chlorophenolic odor; crystallizing point 174.0° C. min. Stable; relatively nonhygroscopic; insoluble in water but soluble in most organic solvents, fats, waxes, resins and asphalts. Boiling point is 293° C. at 760 m.m. Relatively inert chemically, but reacts with strong alkalis to form water-soluble salts.

General Information: A water-insoluble industrial preservative and herbicide. Used as an insect- and decay-control agent for wood, cellulosic products, textiles, and as an active ingredient in herbicide formulations.

Application Information: Wood-preservative formulations of Santophen 20—Penta—can be applied by any of the accepted methods—pressure, soak, dip, brush or spray.

NAXONATE . . . A Wyandotte Hydrotrope

Sodium Xylenesulfonate, marketed under the name of Wyandotte Naxonate, has the unusual property of increasing the solubility of a great variety of organic chemicals in water. Naxonate is useful for attaining and maintaining the homogeneity of scouring and sizing compositions, printing pastes and spotting agents. It is finding application in solvent extractions and in speeding up chemical reactions in aqueous solutions.

SOFTENERS, RUBBER

Compounds usually produced from coal-tar hydrocarbons, mineral black oil, coal-tar resins, mixtures of mineral and vegetable oils, petroleum derivatives, turpentine or derivatives, asphaltic products, natural hard bitumen, resins from rosin, etc. Not all compounds possess all the following properties: lubrication, reduction of power consumed in milling operations, improvement of the curing rate, increased dispersion of pigments, improvement of aging qualities, greater smoothness of finish.

SOFTENERS, STENCIL

Fred L Brooke Co, 3340 N Halsted St, Chicago, Ill
*M Michel & Co, 90 Broad St, N Y 4

SOFTENERS, TEXTILE

Compounds which impart a softness of handle or feel to finished textiles. Previously, oils, such as castor and olive were used and still are to some extent, but in recent years many compounds and chemicals of a complex nature have been introduced. Many softeners are prepared by condensing aleic and stearic acids with ethylene diamine and its alkyl derivatives. o-Phenylene diamine can be substituteed for ethylene diamine. Another class includes the thioethers made by reacting saturated or unsaturated monomeric aliphatic compounds or hydroaromatic compounds which contain a mercapto group, with 1:2-propylene oxides, which are substituted in the methyl group by a halogen, or hydroxy, or a mercapto radical.

SOFTENERS, WATER

Substances used to remove sol. compounds of lime and magnesia present in natural waters and which form scale and sludge when used in boilers. Soft water is also essential in numerous industrial operations for the sol. lime and magnesium salts react with other chemicals employed to form undesirable compounds which interfere adversely with operations and processes. The four outstanding processes used for softening water are: distillation, the cold lime-soda process, the hot lime-soda process, and the zeolite process. SOLDERS, ALUMINUM

Usually alloys of from 50-85% tin, 15-50% zinc and aluminum. Higher melting alloys contain from 73-87% tin, 8-15% zinc, and 5-12% aluminum. Certain alloys contain copper instead of tin, still others have copper and lead as well as zinc, tin and aluminum. A few have a silver content. A representative alloy contains tin, 55%; zinc, 33%; copper, 1%; aluminum, 11%.

SOLVENTS, COAL-TAR

Coal-tar solvents are generally aromatic hydrocarbons of the benzene series, but other compounds obtained from coal-tar, as those of the phenol series and nitrogen bases, such as pyridine, have special solvent properties that make them useful for a wide variety of purposes. Ordinarily the constituent compounds are those contained in coal-tar light oil obtained both from scrubbing coal gas or by the distillation of coal-tar produced by the high temp. carbonization of bituminous coal. They are supplied to meet required specifications as to boiling range, color, flash point, etc. See also Naphthas, Benzol, Toluol, Xylol, etc.

SOLVENTS, DRY-CLEANING

Products used to extract dirt, grease, grime, certain stains, etc., from articles in dry-cleaning establishments. Various types are employed, including coal-tar solvents, the chlorinated solvents, petroleum solvents (particularly Stoddard Solvent) proprietary compounds, etc. General considerations include solvent power, rate of penetration, ease of separation from extracted matter, adaptability to dry-cleaning equipment, economical recovery, stability, toxicity, and flammability. See also Naphtha, Benzol, Carbon Tetrachloride, Trichlorethylene, Stoddard Solvent, etc.

SOLVENTS, ETHYL CELLULOSE

Ethylcellulose films of max. tensile strength and elongation are obtained from alcohol-hydrocarbon solvents formulated in such a way that the last solvent to evaporate from the film consists almost entirely of hydrocarbon. If the evaporation rates of the alcohol and of the hydrocarbon are approx. equal, the solvent mixture producing the lowest viscosity also produces the best films. The hydrocarbons that can be used alone with alcohols are aromatic hydrocarbons, hydrogenated naphthas, or high solvency naphthas. Naphthas from paraffin crudes give the best results when used with a small proportion of

SOLVENTS, METAL DEGREASING

Various coal-tar and petroleum solvents have long been used by the manufacturers of small metal parts for degreasing before finishing. Within the past few years vapor-phase degreasing has been introduced in larger units, requiring solvents with low-boiling points, low fire and health hazards. Most often used are low-boiling chlorinated solvents, such as trichlorethylene, ethylene dichloride, carbon tetrachloride, or mixtures of these of other products.

SORBIDE (Dianhydro Sorbitol)

$C_6H_8O_2(OH)_2$. A non-toxic dihydric alcohol cyclic inner ether. Pure cryst. melts at 62°C. B.P. 176.5°C at 10 mm. Commercial grade is an 83% aqueous solution of pH=5, viscosity 150-130 cp. at 25°C. Hygroscopic. Sol. water, lower alcohols, ethylene glycol, cellosolve, pyridine; insol. most other solvents. Uses—conditioning agent of low viscosity and narrow humectant range; in medicine; derivatives mfr. Grades—commercial solution.

*Atlas Powder Co, 9 & Market Sts, Wilmington 99, Del

SORBIDES see Sorbitol Esters

SORBITAN (Monoanhydro Sorbitol)

$C_6H_8O(OH)_4$. A non-toxic tetrahydric alcohol cyclic inner ether. Cryst. are white, odorless, sweet with bitter after-taste. M.P. 110-111°C. Commercial grade is an 83% aqueous solution of pH=5, viscosity 500-900 cp. at 25°C. Sol. water, lower alcohols, ethylene glycol cellosolve and pyridine; insol. most other solvents. Uses—conditioning agent of lower viscosity and greater solubility than sorbitol, but with same narrow humectant range. Grades—cryst.; commercial.

SOURS, LAUNDRY

Compounds employed to neutralize the alkali which the water used for rinsing may contain. Good practice does not countenance the use of sours for neutralizing laundry sodas, soap, or bleach, except such traces as cannot be removed by thorough rinsing. Acetic and oxalic acids are used, but in recent years, specially compounded products, usually containing sodium silicofluoride, have been offered whose action is less harsh and more easily controlled.

SULFADIAZINE (2-Sulfanilamidopyrimidine)

M.W. 250.27. White elongated prisms or crystalline powd. Sulfadiazine is sol. 0.0123 g. in 100 cc. water at 37°C. It is readily sol. in aqueous bases or mineral acids: sl. sol. in alcohol or acetone, insol. in ether or chloroform. M.P. between 253°-256° C with decomp. when inserted in a bath at 245°C and heated at 4°C per minute. It may be assayed by diazotization. Is useful in all the diseases treated by previous sulfanilamide derivatives, especially diseases caused by B-hemolytic streptococci, staphylococci, pneumococci, meningococci, gnococci and B. coli. It has the advantage of much lower toxicity than other drugs of comparable potency: hence may be used at more effective blood levels. Its solution in triethanolamine has shown outstanding properties in treatment of severe burns.

SULFAGUANIDINE (Sulfanilylguanidine)

M.W. 232.26. White, odorless needle-like cryst. or crystalline powd. Sulfaguanidine is sol. 10 g. in 100 cc. of boiling water, and 0.22 g. in 100 cc. at 37.5°C. It is 5% soluble in boiling 95% alcohol, 1.5% in boiling acetone. It is difficultly sol. in ethyl acetate and insol. in benzene, ether and chloroform. It is readily sol. in cold bases. It is destroyed by boiling with strong bases. It melts in the range 189° to 192°C. after preliminary softening. In a short sealed tube, it melts at 142.5°-143.5°C. It may be assayed by diazotization. Effective in treatment of various bacterial diseases of intestines such as dysentery. Is poorly absorbed into blood stream so may be given in high dosage to secure action on intestinal organisms without reaching toxic blood levels.

SULPHUR

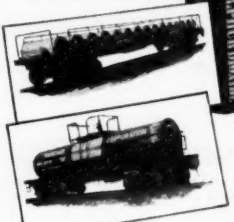
Many users of Sulphur are finding that Sulphur Dioxide can be effectively and economically substituted for Sulphur. Many industries have made this conversion and the results have been most satisfactory. Perhaps Sulphur Dioxide can be just as effectively adapted to your operation. At no obligation to you, one of our representatives would be glad to consult with you.

SULPHUR-DIOXIDE
HIGHEST QUALITY
SO_2

One of the newer chemicals with hundreds of uses. Economical and convenient to use.



BLEACHING AGENT
For paper pulp, textiles, many food products, minerals and other materials.

DECHLORINATING AGENT
Removes excess chlorine in paper pulp and textile bleaching.

CHEMICAL PROCESSING
SO_2 has many uses in chemical processing such as oil refining, plastic manufacturing, leather tanning and hundreds of other uses.

triethyl phosphate

• Eastman triethyl phosphate is soluble in water and most organic solvents. Although moderately resistant to hydrolysis, it is a promising ethylating reagent. It is used as an intermediate in the preparation of the insecticide tetraethyl pyrophosphate, as an ingredient in sizing compounds, as a dyeing assistant in the textile industry, as a lubricant, and as a flame-resistant plasticizer. Available in 5-gallon cans, drums, and tank cars.

TRADE-MARK

VINYL ACETATE

CH_3-COO-CH=CH_2

Stabilized - Unpolymerized

NIACET Vinyl Acetate is the stabilized monomer, boiling range 71.8 to 73°C. It can be polymerized to form resins with exceptional bonding qualities for wood, glass, metals, and fibers. Vinyl Acetate is shipped in 410 lb. drums, and 62,500 lb. tank cars.

VITAMIN B_2

$C_{17}H_{20}N_4O_6$. M.W. 376.36. Orange-yellow, crystalline product, melting at 280-290°C (with decomp.). It is only sl. sol. in water (0.0025 gram in 100 cc), the solution exhibiting an intense yellow-green fluorescence. Readily sol. in caustic soda solution, alcohol, cyclohexanol, and amyl acetate. Insol. in ether, chloroform, acetone, and benzol. The pure crystalline vitamin is sensitive to light, but it is stable in the dark even at high temp. It is also stable toward most oxidizing agents but can be reversibly reduced. A deficiency of this vitamin has an effect on growth and leads to skin lesions of various types. Riboflavin is generally used medicinally but is an essential ingredient of the new enriched flour.

DESCRIPTION

Bareco Microcrystalline Waxes are complex hydrocarbons, microcrystalline in structure, separated from selected fractions of petroleum. Investigation has shown, from their determined molecular weight, that their approximate composition may be expressed by the formula $C_{18}H_{98}$—hydrocarbons of the saturated aliphatic series. They are 100% pure petroleum products containing no adulterants or additions of any kind. The term mircocrystalline is a general one used to describe the crystalline structure of these waxes in contrast to paraffin wax which, while also produced from petroleum, has much larger crystals.

FLEXIBILITY

Bareco's complete line of 19 different microcrystalline waxes affords the user the choice of the correct grade for his specific application. Soft, plastic and ductile waxes, hard brittle waxes of high melting point, as well as intermediate grades, are included in the line. Write for samples today.

GRADES AND COLORS

Bareco Microcrystalline Waxes are manufactured in a wide range of melting points—155°F. —195°F. This flexibility provides opportunity for wax application over hundreds of different industries, a sample of which can be seen at the far left. Several color grades are available within each melting point range.

PROPERTIES

High Water Vapor Resistance
High Melting Points, 155°F.-195°F.

WAX, PETROLEUM

Obtained as by-product from the distillation of paraffin base petroleum. Outstanding characteristic is the resistance to the passage of moisture vapor. Uses—in candle-making, as impregnating and coating material for paper and cardboard. Low fire hazard, stability and high glosscs which are obtainable with their use are certain other important characteristics. Various grades include scale wax, semi-refined wax, fully refined wax, the plastic or amorp. waxes, such as ceresine, ozokerite, etc., which while not made from petroleum in the usual sense, nevertheless are hydrocarbon waxes of mineral origin and hence can be placed in the same category as the petroleum waxes. The petrolatums are also amorp. waxes and should be included in this general grouping.

WAXES, VEGETABLE

General term denoting natural waxes of vegetable origin: See Wax, Carnauba; Wax, Candelila; Wax, Japan; Wax, Bayberry. Other waxes in this group include—Fibre Wax, Cotton Wax, Flax Wax, Sugar Cane Wax, Tea Wax, Rose Wax, etc. Vegetable waxes are very complex chemically and therefore difficult to define their properties. In the group are usually the hardest waxes. Carnauba is extremely hard, insol. in water, but can be obtained in an aqueous state by boiling with alkalies and emulsifying agents. Widely used in polishes of many various types. Candelilla is very hard but somewhat brittle. Japan more closely resembles the animal tallows in composition and finds wide usage in laundry finishing, leather dressing, etc. Bayberry closely resembles Japan in its composition.

"VIRGINIA"
ZINC HYDRO
DOES IT!
"Virginia" Zinc Hydrosulphite is a powerful reducing and bleaching agent prepared expressly by "Virginia" as a brightening and decolorizing agent for the pulp and paper industry. Paper products can be upgraded by as much as seven points in brightness by using this quality ZnS_2O_4—the *only* high test zinc hydro available commercially. In 250-lb. single-trip steel drums.

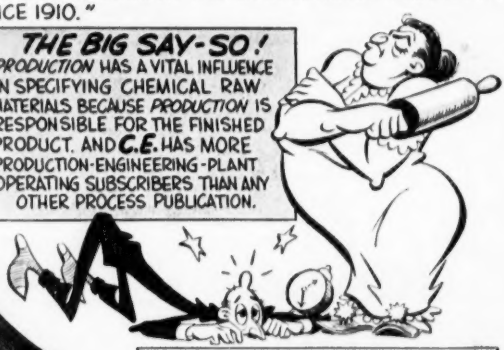
FACTS about CHEMICAL ENGINEERING



.....FOR *RAW MATERIALS* ADVERTISERS IN THE *CHEMICAL PROCESS INDUSTRIES*

R.W. HOOKER, VICE PRESIDENT IN CHARGE OF SALES, **HOOKER ELECTROCHEMICAL CO.** SAYS," THE PRODUCTION-ENGINEERING AUDIENCE WHICH **CHEMICAL ENGINEERING** PROVIDES IS OF GREAT IMPORTANCE TO US IN OUR DISTRIBUTION OF CHEMICALS FOR THE *CHEMICAL PROCESS INDUSTRIES*. THAT IS WHY **C.E.** HAS BEEN AN IMPORTANT FACTOR IN OUR ADVERTISING PROGRAM SINCE 1910."

THE BIG SAY-SO!

PRODUCTION HAS A VITAL INFLUENCE IN SPECIFYING CHEMICAL RAW MATERIALS BECAUSE *PRODUCTION* IS RESPONSIBLE FOR THE FINISHED PRODUCT. AND **C.E.** HAS MORE PRODUCTION-ENGINEERING-PLANT OPERATING SUBSCRIBERS THAN ANY OTHER PROCESS PUBLICATION.

THE BEST SOURCE OF ALL.... ON "WHO BUYS RAW MATERIALS" ARE THE MEN WHO SELL THEM. **C.E.** SURVEYED *THE SALESMEN'S ASS'N OF THE AMERICAN CHEMICAL INDUSTRY.* PRODUCTION RANKED AT THE TOP.

NO BETTER INDICATOR...

...OF THE INTEREST OF **C.E.** READER$ IN RAW MATERIALS. IN THE ADVERTISING RESEARCH FOUNDATION STUDY OF **CHEMICAL ENGINEERING** THEY RECEIVED **50%** MORE READERSHIP THAN ANY OTHER PRODUCT CATEGORY. SIX OF THE TOP 20 BEST-READ ADS WERE ON RAW MATERIALS.

Technical Data

A selection of miscellaneous tables collected from various sources and published to provide a handy reference for frequently needed technical information.

Table of Conversion Factors*

Data are arranged alphabetically.

Unless designated otherwise, the English measures of capacity are those used in the United States, and the units of weight and mass are avoirdupois units.

The word gallon, used in any conversion factor, designates the U. S. gallon. To convert into the Imperial gallon, multiply the U. S. gallon by 0.83267. Likewise, the word ton designates a short ton, 2,000 pounds.

The figures 10^{-1}, 10^{-2}, 10^{-3}, etc. denote 0.1, 0.01, 0.001, etc., respectively. The figures 10^{1}, 10^{2}, 10^{3}, etc. denote 10, 100, 1000, etc., respectively.

With respect to the properties of water, it freezes at 32° F., and is at its maximum density at 39.2°F. In the conversion factors given below using the properties of water, calculations are based on water at 39.2°F. in vacuo, weighing 62.427 pounds per cubic foot, or 8.345 pounds per U. S. gallon.

"Parts Per Million," designated as P.P.M., is always by weight and is simply a more convenient method of expressing concentration, either dissolved or undissolved material. Usually P.M.M. is used where percentage would be so small as to necessitate several ciphers after the decimal point, as one part per million is equal to 0.0001 per cent.

As used in the Sanitary field, P.P.M. represents the number of pounds of dry solids contained in one million pounds of water, including solids. In this field, one part per million may be expressed as 8.345 pounds of dry solids to one million U. S. gallons of water. In the Metric system, one part per million may be expressed as one gram of dry solids to one million grams of water, or one milligram per liter.

In arriving at parts per million by means of pounds per million gallons or milligrams per liter, it may be mentioned that the density of the solution or suspension has been neglected and if this is appreciably different from unity, the results are slightly in error.

Hackney Welded Type Drum, with Toggle-tite quick - action closure

Aluminum, Steel and Stainless Steel
REMOVABLE HEAD DRUMS AND BARRELS

Hackney *Returnable* Drums and Barrels are ruggedly constructed to assure a long lasting container supply. These containers permit easy removal of contents because openings are unobstructed. Chime construction leaves no cracks or crevices, making the drums easy to clean. Removable heads, forming airtight cover, are held snugly to curled edges of container by toggle-tite or single bolt type clamp rings. Hackney removable head barrels and drums conform to ICC specifications. Write for complete details.

ELECTRIC BATHS

CONSTANT TEMPERATURE

Accurate Temperature to 0.2° C. Plus or Minus—Agitator to Maintain Uniformity—Cooling Coil for Below Room Temperature—Stainless Steel Construction.

The series 300 Baths are designed for laboratories requiring constant temperature with a high degree of accuracy. Temperatures up to 100° C. can be developed within an accuracy of plus or minus 1/5 of 1° C. Typical uses include specific gravity determinations, conductivity tests, physio-chemical and botanical experiments.

through these doors...

Through these doors pass many difficult *canning problems*. There's a good reason. Crown's on-time deliveries, design and label service, plant engineering and laboratory field services, and expert merchandising counsel are geared to provide successful solutions.

What's Your Can Problem?

Why Not Talk It Over With A Crown Sales Representative

CROWN CAN

One of America's Largest Can Manufacturers

Plants at Philadelphia, Chicago, Orlando • Branch Offices: New York, Baltimore, Pittsburgh, St. Louis • Division of Crown Cork & Seal Company

A Symphony in "F" Style Cans

Continental "F" Style cans strike a high note in packaging chemical products from floor wax to radiator flush.

If specifications call for lithography, Continental's specialists can make brands stand out against competition. And, of course, products are well protected when shipped in Continental "F" Style cans.

These rugged, attractive cans are made in practically every size: ½-pint, pint, quart, ½-gallon and gallon.

Continental also makes steel containers that are tops for bulk shipments of chemical products. They include:

CONTAINER	SUGGESTED USE
Open Head Pails	Adhesives
Closed Head Drums	Anti-Freeze
Utility Can	Insecticides
50 & 65 lb. Flaring Pails	Soap Powder
Small Flaring Pails	Dry Chemicals
